

MobilWarn Burglary Protection + Blind Spot 6-in-1 Assistant

TECHNICAL DATA

Operating temperature	-20° - +75°C
Storage temperature	-40° - +125°C
Operating current	<= 1000 mA
Working voltage	9 - 32 Volt
Nominal voltage	12/24 Volt DC

MobilWarn Burglary Protection + Blind Spot 6-in-1 Assistant

Art.No. 510029621
HAN MW/FLEX-G4-6IN1

Price on demand

SCOPE OF DELIVERY

1x Main unit with AI-software
2x Smallball camera
1x Connection cable set
1x L4-Display A-pilar
1x License for software

Optional:
7 Zoll AHD-Monitor
3. AI camera
4. AI camera

Optional:
Kalibration set
G4 USB-HUB
G4 Data cable for Laptop

DESCRIPTION

The MobilWarn Burglary Protection + Blind Spot 6-in-1 Assistant is the first alarm system that uses artificial intelligence to actively assist the driver while driving and, when stationary, acts as an alarm system that detects burglars before they can damage the vehicle or steal the e-bike.

Two to four AI cameras monitor the vehicle and detect people and vehicles. This allows it to monitor the blind spot while driving and provide optimum protection for the exterior of the vehicle when stationary.

When stationary:

1. Preventive burglary protection with pre-alarm
2. Dashcam for alarm monitoring
3. Alarm push notifications

While driving:

4. Left and right turn assistant
5. Left and right lane change assistant
6. Dashcam function while driving

Prevent damage before it happens!

The highlight of the AI alarm system is that it alerts you within seconds if someone is tampering with a door, window, or e-bike.

This means that potential thieves can be deterred before any damage is done.

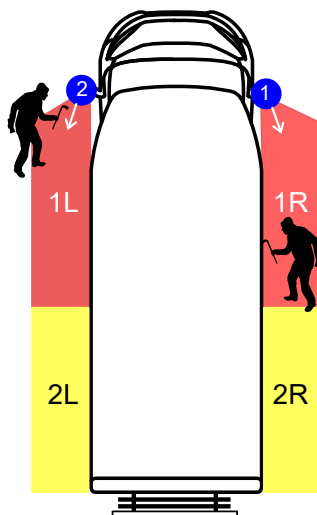

After approx. 4 seconds of advance warning: deterrence by light External warning

(flashing side marker lights / hazard warning lights / external LED)

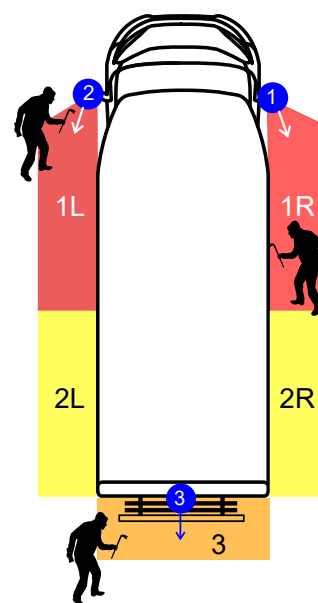

After approx. 10 seconds: main warning: additional audible warning
(wakes occupants + external alarm possible)

After approx. 10 seconds: push notification via email (optional)
(with SIM card inserted + server connection)

Alarm zones mit 2 cameras

Alarm zones with 3 cameras

Developed for the european specializid trade

Subject to modifications

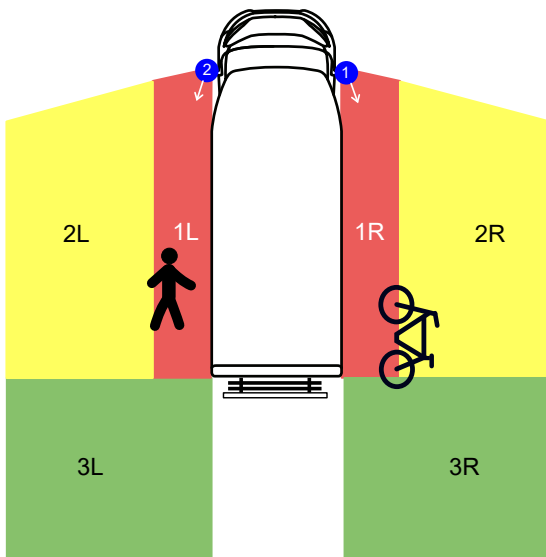

V-EN-DB-MW_G4Alarm-16.09.2025

Can be individually combined with 2, 3, or 4 AI cameras for optimal all-round protection

Warning zones during driving

Blind spot assistant while driving

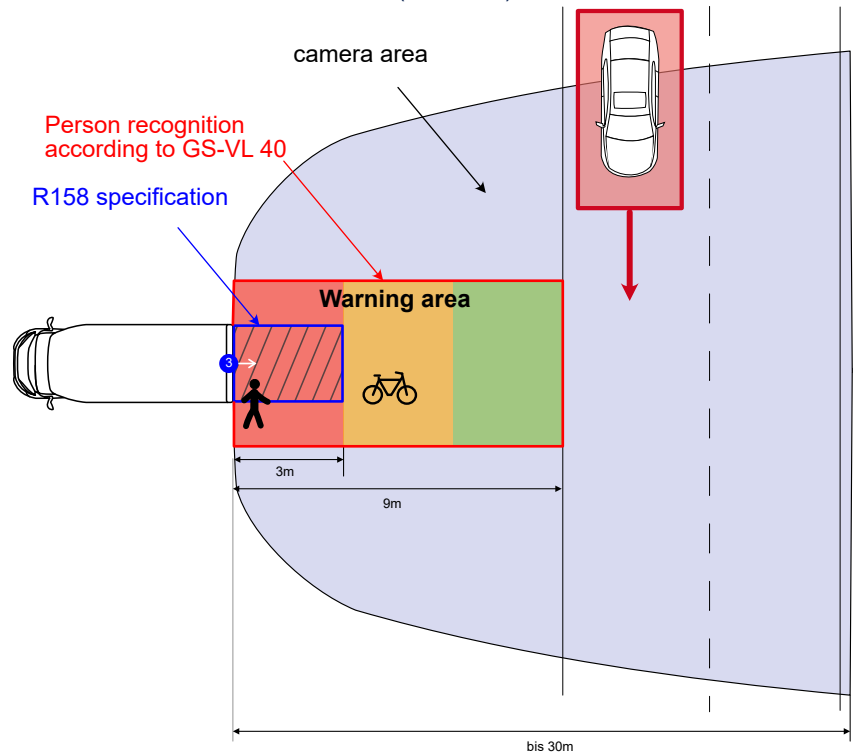

- Left and right turn assistant
- Left and right lane change assistant
- Camera image from the right blind spot (0-35 km/h)

Warning zones when reversing

Rearview camera with RAS rearview assistant

- Rearview camera image according to R158
- RAS rearview assistant warns of pedestrians, cyclists, and moped riders (according to GS-VL 40)
- Rearview mirror function (>35 km/h)

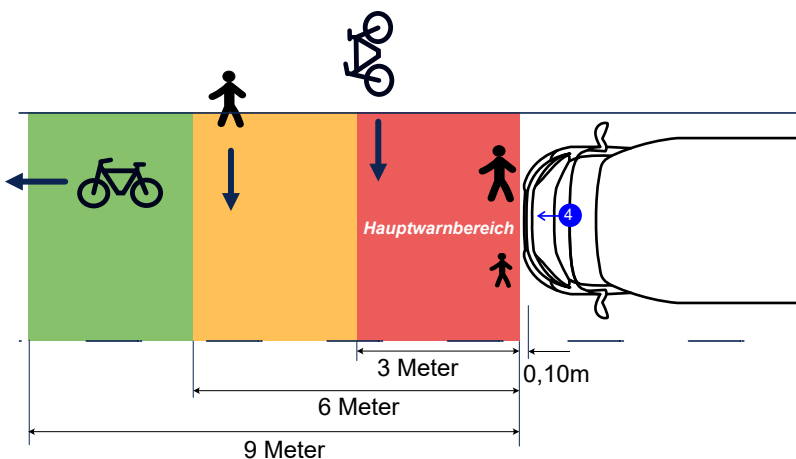

Front camera as dashcam

+ Warnings for pedestrians, cyclists, and moped riders when starting off (Mois R159)

(Front camera extension)

Can be activated as an additional function:

- Distance warning system as brake assist
- Lane departure warning system
- MOIS collision warning system R159

Driver display with warning messages (L4 display)
